## IT Skills

**Languages** : C, HTML, Java, Java Script  
**Operating Systems** : MS DOS, Windows98, NT, 2000, XP

## PROJECTS UNDERTAKEN

### Geo Spacial Matching for Image Retrieval

Every day the average person with a computer faces a growing flow of multimedia information particularly via the Internet. But this ocean of information would be useless without the ability to manipulate, classify, archive and access them quickly and selectively. While text indexing is ubiquitous, it is often limited, tedious and subjective for describing image content.

One of the main problems was the difficulty of locating the desired image in a large and varied collection, while it is perfectly feasible to identify the desired image from a small collection simply by browsing. More effective techniques are needed with collections containing thousands of items.

### Digital Signature Using C

Developed an Application by signing the document, the person who signs it assures that he is the author of the document or the message that was signed.

### Developed Online E commerce Store “Lappy World”

Developed an Online Application where users can view various information about Laptops, their Accessories. It involves use of HTML, and JSP.

### Library Management using Java

The Java Library Management System is designed & developed for a receipt and issuance of books in the library along with the student's details. This project gives complete information about the library. Developed using Java.
